Process electrodes

For information about our comprehensive range of products for process analytics, please consult our "Process Electrodes" catalog, which we will send to you at your request.

Tips and information for successful measuring

Storage

Store pH and redox electrodes in the solution for filling the reference electrodes (immerse up to diaphragm). In most cases this is a KCl solution (3 mol/l Type No. L300). Low maintenance electrodes should also be stored in a KCl solution. Conductivity measuring cells can be stored in a dry location after cleaning and rinsing with distilled water.

Measuring

Open the refill opening on refillable pH and redox electrodes before performing measurements. Immerse the sensor into the medium to be measured at least up to the diaphragm. When using refillable sensors pay attention to the electrolyte fill level (see refilling). Rinse the sensor with distilled water between measurements, however do not wipe off. Carefully dab off excess drops.

Calibration

For quality relevant pH measurements it is necessary to calibrate and, if necessary, adjust the pH measuring equipment using buffer solutions to ensure that they meet the requirements for measuring accuracy. If buffer solutions are taken from a bottle, ensure that the bottle is reclosed immediately after

removal. Never return the used buffer solution to the bottle, always throw it away. DIN buffer solutions in ampoules are recommended for higher quality requirements, because such ampoules always contain fresh, single portions of the solution. Redox sensors are not calibrated. They can be checked for proper function using appropriate test solutions. The cell constant of conductivity measuring cells should be checked at regular intervals with test solutions and readjusted, if required. Major deviations in the cell constants indicate soiling or damage. It may be recommendable to replat the platinum electrode.

Refilling

Refillable pH and redox sensors should be

filled with electrolyte solution so that the fill level of the electrolyte solution is at least 5 cm above the level of the medium to be measured. BlueLine electrodes can be refilled simply

by pumping electrolyte solution into them with a small dispensing bottle (cf. Fig.).

Cleaning

Empty the soiled reference electrode, rinse with electrolyte solution and refill with electrolyte solution. When soiled, glass membranes or diaphragms should be cleaned to maintain the measuring function. Depending on the degree of contamination submerge only the glass membrane or the glass membrane and diaphragm in the cleaning solution. Ensure that any cleaning agent, which has leaked into the electrode, does not come into contact with the reference system; if necessary rinse out the reference electrode with electrolyte solution. We recommend the methods listed below depending on the degree of contamination.

After cleaning rinse off the sensor with distilled water and condition it for one hour or longer in electrolyte solution. Recalibrate the measuring equipment before performing further tests.

Contamination	Treatment	Remarks
Inorganic adhering substances	Several minutes with substances such as HCl 0.1 mol/l or NaOH 0.1 mol/l	Better cleaning action when solution is warm (40 - 50 °C).
Organic substances (oils, greases,...)	Rinse with suitable organic solvent (e.g. ethanol, acetone, etc.) or tenside solution	Observe resistance of plastic shaft to chemicals; Sensor can also be wiped off with a soft, moist rag.
Proteins	Approx. 1 hour with pepsin/HCl solution (type No. L 510)	
Sulfides (on ceramic diaphragm)	With thiocarbamide/HCl solution (7.5% in HCl 0.1 mol/l) until color is removed	Cause: Reaction between electrolyte and solution to be measured. Remedy: Electrodes with platinum diaphragm and Ag ⁺ -free electrolyte.

pH glasses/diaphragms

Different applications require appropriate, especially matched pH electrodes.

You can select the electrode with the optimum pH glass and diaphragm for your specific application.

pH glass

SCHOTT Instruments electrodes are manufactured using various types of pH glasses. These have been optimized for your application and offer high measuring accuracy and reliability. Select the right pH glass for your application:

pH-Gläser

N-glass: for general applications over the entire pH range.

A-glass: with short response time in drinking water, service water and wastewater, for general applications and in media with low ion content.

L-glass: for low temperatures and general applications.

H-glass: for high temperatures; in acid and alkaline range, even with high sodium ion concentrations.

S-glass: in hot alkaline media with good reproducibility and short response times. For process electrodes.

Diaphragms

Selection of an electrode with a suitable diaphragm is an important factor for reliable and reproducible pH measurement:

Diaphragm:

Platinum diaphragm: for precision measurement, universal, shows its strength particularly with solutions containing solids and extreme pH values and temperatures. Ideal for titration and very insensitive to stirring.

Ceramic diaphragm: robust for general applications. Low electrolyte outflow rate.

Ground joint diaphragm: easy to clean, preferred for liquids with high quantities of solids, suspensions, emulsions, creams and low ion mediums. High electrolyte outflow rate.

Fibre diaphragm: robust, minimum maintenance electrodes. Preferred for general applications and field measurements.

KPG®-annular gap diaphragm: On minimum maintenance electrodes with Referid® polymer electrolyte. Symmetrical annular gap, insensitive to soiling, low flow sensitivity, low immersion depth.

The platinum diaphragm developed by SCHOTT gives electrodes particularly constant and reproducible measuring characteristics.

It consists of twisted platinum wires potted into the glass shaft of the electrode. The defined intermediate space between the platinum wires ensures a continuously uniform electrolyte flow rate in all mediums and at all temperatures, which remains constant over the entire service life of the electrode.

Recommended applications for ScienceLine laboratory electrodes (also applies to derived ID versions)

Application/measuring medium	Recommended electrodes	Description	Page
General	N 61	wide range of application	48
	A 161, N 1051 A	wide range of applications, integrated temperature sensor	44/50
Ammonia	NH 1100	universal	62
Insert measurements	L 6880	refillable	52
	L 8880	low maintenance	52
	N 5800 A	refillable, micro-electrode	52
	N 48 A	refillable, robust	52
	N 1048 A,	refillable, robust, integrated temperature sensor	52
Mediums with low-ion content	N 61	platinum diaphragm, high speed	48
	N 64	ground joint diaphragm, higher KCl flow rate	48
	A 164	ground joint diaphragm, higher KCl flow rate,	44/50
		integrated temperature sensor	
Small trial quantities, small vessels (e.g. ampoules, bulbs)	N 5800 A	micro-electrode for insert type measurement	52
	N 5900 A	micro-electrode	52
	N 6000 A	micro-electrode, 0.1 ml solution and higher	46/52
	N 6003	micro-electrode for NMR tubes	52
	A 157	micro-electrode with integrated temperature sensor	46/52
Portable Knick pH Meter (knick electrode head)	N 50 A	pH combination electrode	48
	N 1050 A	same as N 50 A, integrated temperature sensor	50
Alkaline solutions, acids (strong)	H 61	extreme pH values, also high temperatures	48
	H 161	extreme pH values, also high temperatures, integrated temp. sensor	44/50
Conductivity measurement	LF 613 T	universal	60
	LF 713 T	organic solutions, acids (particularly H ₂ SO ₄)	60
	LF 413-3 T	universal, 4-pole graphite sensor	44/60
Sodium	Na 61	universal	62
Surface measurements	L 39	refillable, plastic shaft	46/52
Redox potentials	Pt 6880	general measurements	54
Oxygen	Ox 1100+	universal, galvanic electrode	62
	9009/61	universal, amperometric electrode	62
Wastewater with high quantities of suspended matter, suspensions	N 64	normal conditions	48
	A 164	normal conditions, integrated temperature sensor	44/50
	H 64	also high temperatures, extreme pH values	44/48
Titration	N 62	pH general, refillable	48
	N 61 eis, N 6480 eis	pH non-aqueous, electrolyte LiCl/glacial acetic acid	48
	A 7780	pH general, low maintenance	44/48
	A 162	pH general, refillable, integrated temperature sensor	50
	N 6480 eth	pH non-aqueous electrolyte LiCl/ethanol	48
	AgCl 62	halogenide ions	54
	KF 1100	Karl-Fischer titration	56
	Ca 1100 A	Ca/Mg total hardness	62
	Cu 1100 A	complexometric metal titration	62
	F 1100 A	fluoride titration	62
	Pb 1100 A	sulfate titration	62
	Pt 1200, Pt 1400	double Pt electrode for dead-stop titration	56
	Pt 6280, Pt 6580	redox titration general	54
	Pt 5901	redox titration (COD)	54
Tris buffer	N 6250	calomel reference	48

Suitable electrodes for other applications are given in the corresponding chapters.

ScienceLine: A maximum of adaptability for all your applications

Only ScienceLine electrodes offer these advantages:

While the BlueLine electrodes were developed as reliable sensors for a series of standard tests, the ScienceLine electrodes have proven themselves million of times over as heavyduty laboratory electrodes from SCHOTT Instruments for practically all applications in the laboratory and in the field.

ScienceLine electrodes not only offer you maximum measuring accuracy and measuring consistency – with optimum sensor service life – but also a maximum of adaptability for all your applications, even at high temperatures.

A few examples:

- With ScienceLine electrodes you have a larger selection of diaphragms, e.g. including the annular gap diaphragm which has proven itself exceptionally in the process field and is combined with the Referid® electrolyte in the L 8280.
- The ScienceLine electrodes offer you a larger selection of microelectrodes for particularly small sample quantities and small vessels as well as a variety of electrodes for insert-type tests also with liquid electrolyte, for example the L 6880.

- With ScienceLine electrodes, more types of membrane glass are available, including H-glass, which has a very high accuracy even in the highly alkaline range and is particularly suitable for measurements at high temperature.
- The ScienceLine also offers electrodes with extreme lengths up to 500 mm, which allow measurements in very deep vessel and test tubes.
- ScienceLine offers a large selection of metal electrodes for Redox potential measurements and titration.
- The ScienceLine also offers sensors for other parameters such as ammonia, sodium and oxygen.
- A large number of ScienceLine electrodes are already equipped with a temperature sensor. Many sensors have the SMEK plug head, which allows connection of the electrodes to various measuring instruments using the large selection of plug/cable combinations.
- For particularly demanding measuring applications, the ScienceLine also offers the possibility of using separate measuring and reference electrodes to fully utilize the longer service life of the glass electrodes for more economic testing.

More versatile, faster, more practical!

For example: the new Micro electrode A 157

ScienceLine micro, spear tip and surface pH combination electrodes

Micro, spear tip and surface pH combination electrodes

Reference system:	silver/silver chloride
Shaft material:	glass (except L 39: plastic shaft)
Zero point:	pH = 7.0 ± 0.3
Electrolyte:	KCl 3 mol/l (except L8880: Referid®)
Type of membrane glass:	A
Connection cable: for SMEK plug head:	e.g. LS 1 ANN (See also page with connection cables)
for plug head versions:	e.g. L 1 A (See also page with connection cables)
fixed cable:	1 m long, with plug A acc. to DIN 19262 or with BNC plug, as well as plug for temperature sensor

Attractive shape, reliable function: BlueLine in use

The compact BlueLine program covers the most important measuring application in laboratories. Reliable, high speed settings over a wide temperature range, new membrane glass with higher mechanical stability as well as improved gel

electrolyte are only a few features ensuring improved functionality. On electrodes with liquid electrolytes the refill opening is sealed tightly with a practical sliding plug.

Further recommendations for using BlueLine electrodes are given on the following pages. If you have any other special questions regarding BlueLine or the use of our electrodes: Simply call us.

■ Recommended by SCHOTT Instruments

■ Can be used for application

³⁾ See also ScienceLine electrodes with H-glass.

For some applications, other application recommendations are practical. Please also observe the material resistance of the sensor to the measuring medium. Other sensors are available in our ScienceLine product range. If you cannot find your application, please ask us – by telephone, fax or E-mail.

BlueLine pH combination electrodes

The robust electrodes for general applications

pH range	0...14
Temperature range	-5...+80 °C
Shaft	Noryl, 12 mm Ø
Shaft length L	120 mm
Zero point	pH = 7.0 ± 0.3
Diaphragm	fibre
Reference system	Silamid®
Reference electrolyte	gel (KCl), low maintenance, not refillable
Shape of glass membrane	cylindrical
Resistance of glass membrane (25 °C)	400 MΩ
Type of membrane glass	A

The liquid electrolyte electrodes for demanding measurements

pH range	0...14
Temperature range	-5...+100 °C
Shaft	glass, 12 mm Ø
Shaft length L L	120 mm
Zero point	pH = 7.0 ± 0.3
Diaphragm	platinum
Reference system	Silamid®
Reference electrolyte	KCl 3 mol/l
Shape of glass membrane	conical
Resistance of glass membrane (25 °C)	300 MΩ
Type of membrane glass	A

Stainless steel shaft, 2-pin cell, 1 m fixed cable with 8-pole plug, sensor stainless steel, cell constant 0.1 cm^{-1} , temperature sensor NTC 30 kΩ, length 120 mm, 12 mm Ø, -5 ... +80 °C, measuring range 0 ... 300 μS/cm, Order No. 285129488

Connection cables

1 Electrode socket/plug

Connection cable for pH , redox, ammonia and sodium combination electrodes, pH and redox single electrodes as well as reference electrodes in *Plus* series

socket L

(Socket L and socket LB are compatible among themselves)

SMEK for pH combination electrodes with temperature sensor as well as conductivity measuring cells, resistance thermometers and oxygen sensors from *Plus* series

socket LS

Electrode plug for reference electrodes from the predecessor series, i.e. "non-*Plus*" versions

plug B

Plug for resistance thermometers in conductivity measuring cells without temperature sensor, for older models

plug 9907/00

Plug for conductivity measuring cells with temperature sensor and oxygen cells, for older models

plug 9909/00

2 Instrument connector/plug

A (DIN, Germany)

BNC (Europe, overseas)

EE (Radiometer)

R (Metrohm)

S (UK socket without extension)

N (4-mm banana plug)

P (2-mm pole plug)

8-pole (for Handylab and CG 853(P))

9910/00

Not illustrated:
D (USA, single electrodes)
H (Seibold, Lemo plug)
X (without instrument plug, free cable end)

Buffer solutions in the unique double-end ampoules offer a particularly high degree of reliability and measuring accuracy.

Hermetically sealed in the glass ampoule and sterilized with hot steam just like a pharmaceutical product, the buffer solutions free of preservation agent have an extremely long shelf life and guarantee continuously error-free characteristics.

The ampoules can be easily opened at the breaking point. Tools are not required. Since refilling is not possible, you are always ensured of maximum calibration reliability.

Order No.	Type No.	Length L [mm]	Dia- phragm	Remarks
285104209	B 511	103 ¹⁾	ceramic	standard taper NS 14.5 and sleeve NS 14.5 for electrode installation
285104217	B 521	120	ceramic	plastic sleeve and sleeve NS 14.5 for electrode installation
285104225	B 522	120	Pt lateral	plastic sleeve and sleeve NS 14.5 for electrode installation
285104233	B 524	120	ground joint	plastic sleeve and sleeve NS 14.5 for electrode installation

¹⁾ Length from upper end of standard taper

Order No.	Type No.	Description
285123806	BXX	plug for reference electrodes, single pole
285123703	KXX	coaxial plug for combination electrodes and indicator electrodes
285126482	NH 928	electrolyte for ammonia electrodes in 50 ml plastic bottle, 3 membrane modules
285126499	NH 995	membrane module set: 3 membrane modules, 3 caps
285126639	OX 923	3 spare membrane heads for oxygen electrodes 9009/61
285126655	OX 925	maintenance set (OX 920, OX 921, OX 923 and SF 300) for oxygen electrodes 9009/61
285126277	OX 929	5 spare membrane heads for oxygen electrodes OX 1100/OX 1100+/OX 1101
285126647	OxiCal® SL	calibrating vessel for oxygen electrodes 9009/61
285126622	SF 300	grinding foil for oxygen electrodes 9009/61
285123728	SXX	coaxial plug for extension cable and for UK socket
285215229	TZ 1520	taper adapter NS 14.5 of PTFE for electrodes with Ø 12 mm shaft
285123103	Z 341	stainless steel clamp for NS 7.5/16
285123136	Z 451	measuring and storage vessel with sleeve NS 7.5/16
285123152	Z 461	measuring and storage vessel with sleeve NS 14.5/23
285123169	Z 462	flow-through measuring vessel with sleeve NS 14.5/23
285123185	Z 472	watering cap for electrodes with 12 mm Ø shaft
285122961	Z 50	Knick electrode adapter
285123193	Z 501	O-Ring seal 10.5/1.5 for electrode plug head
285123214	Z 506	plug head sealing cap with male thread for KXX and BXX plugs
285129509	Z 512	plug head sealing cap with female thread for BlueLine electrodes
